

INFOPersonalize

Personalize

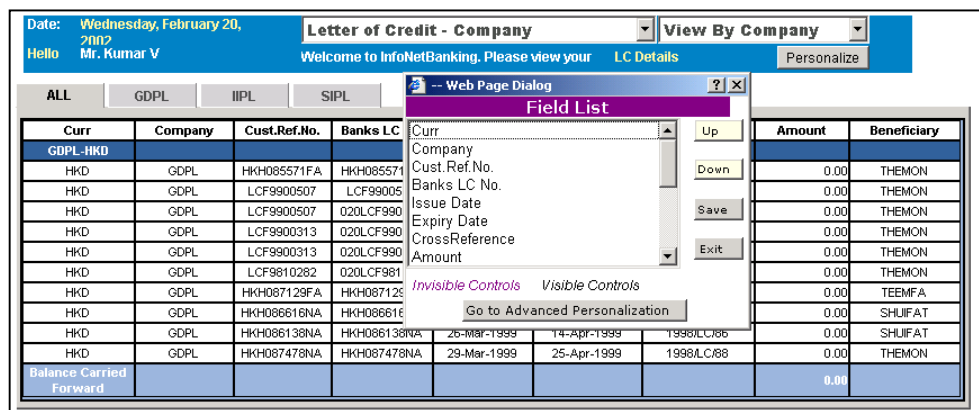

In the Internet world where human interaction is continuous and widely diverse, how does one meet the specific needs of the various personnel who have to interact with the system, without changes to the system. InfoPersonalize is a component that can greatly enrich the user experiences of any Internet offering which aims at providing transaction based information and initiate transactions Online:

- Ability to define own views columns that should be displayed along with the colors. The order of the columns can be changed according to user preference.
- Changes to data entry forms to suit users needs and also create templates.
- Adjustments to reports and their layouts as necessary.

Personalization of views, reports and forms allows for immense flexibility in the users hands and ensures that the varying needs of each user/department and customer situations can be met without changes in programming.

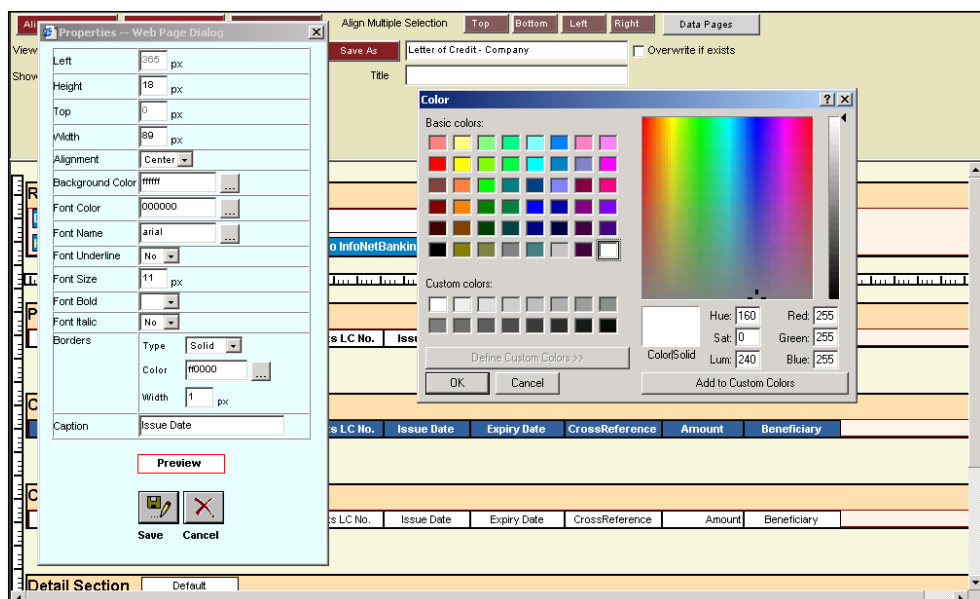

SIMPLE PERSONALIZATION

Allows the user to modify the order or show / hide the controls on the page. This is done with the help of the Field List as shown in the image below.

ADVANCED PERSONALIZATION

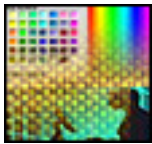

Allows changes to views - column formats, colors, fonts, order of information and so on. The images below illustrate an example of the personalization screens and popup.

Personalize

DATA ENTRY FORMS

In a manner similar to "views", users can also change the Lay out of the forms they use for initiating transactions.

Multiple instances of the same form can be saved, to allow for creation of "Templates" for data entry.

Architecture

InfoPersonalize is a very "user centric" component and utilises web technologies to the maximum. Its architecture is summarised below:

Client - InfoPersonalize is java based code that is browser independent to the most part. Developed primarily using Internet Explorer, it can also be made to Work with Netscape 6.0 or above.

Database - InfoPersonalize is very database driven and offers extreme scalability through this architecture. Currently using Microsoft SQL Server2000, it can also Work with Oracle as a Database.
